With our new online Risk Management Information System (RMIS), clients can access real time information on all account or portfolio locations, along with online location mapping capabilities, surveyed location report database, easy data mining (for COPE information, risk improvement recommendations, loss estimates, risk scoring, and NAT CAT data), as well as interactive recommendation response and impairment management.

The RMIS portal is a secure cloud-based database utilizing Microsoft SharePoint data encryption technology with personal password protected user access available. User provisioning is managed by Microsoft Azure Active Directory.

RMIS Data Analytics

- ❖ Digitization of all account/portfolio data
- ❖ Risk scoring and benchmarking metrics for individual locations and across entire accounts

RMIS Real-time Assessment

- ❖ Analytical charts available in real-time, including survey documents
- ❖ Customized desktop portals and mobile application
- ❖ Recommendation tracking with interactive client portals
